Education

Brooklyn College, City University of New York (CUNY) | Brooklyn, NY
Bachelor of Science Computer Science — Expected Dec 2026
Relevant Courses: Data Structures & Algorithms

Skills

Languages: Java, Python, HTML, CSS, AI API integration (Google Gemini)
Tools: Git,Github,VS code,
Certificates: Intermediate Technical Interview Prep, Intro to Web Development , Google IT Support , Google AI Essentials

Professional Development & Leadership

Google Developer Group, Organizer — *Sept 2025 - Present*

- Co-hosted student tech events and led a four-person team in organizing collaborative workshops to drive campus engagement.

Code2Career, Participant — Feb 2025 - May 2025

- Selected from 1,500 applicants for Google engineer mentorship, completing 30+ coding challenges in data structures and algorithms.

TECHBRIDGE, student — Oct 2026 - Present

- Enrolled in an intensive IT training program covering computer building, networking, and cybersecurity for CompTIA certification.
- Built technical proficiency and teamwork skills through hands-on labs and collaborative peer discussions, balancing coursework with a rigorous schedule.

Relevant Experience

CUNY Tech Prep, *New York, NY*
Data Science Fellow — Jul 2026 - Present

- Apply in-demand technologies like Python, SQL, Pandas, scikit-learn, and Hugging Face as well as industry best practices for exploratory data analysis (EDA), feature engineering, statistical analysis, data visualization, LLMs, RAGs, vector databases, and generative AI applications.

Prenora Dynamics, *New York, NY* — May 2026 - Present

- Frontend Web Developer with hands-on experience modernizing legacy web platforms and improving accessibility. Proven track record of migrating static architectures to dynamic database-driven systems and engineering custom frontend components that elevate user engagement and streamline content workflows.

Projects

SparkBot, SBUHACKS | https://github.com/Rainyy21/SBU-Hackathon — Nov 8 – 9, 2025

- Developed a website using Next.js and Gemini. Make five project idea and user can choose one and go more in depth on the project through a chatbot
- implement Gemini and train the ai to product the project idea and a chat box where user can get more detail

Simplify, CTP hackathon | https://github.com/Rainyy21/CTP-Hacks — Aug 27, 2026

- Built a full-stack data cleaning web app using HTML, CSS, and Flask to process raw datasets by resolving inconsistencies such as missing points, outliers, duplicates, and unstandardized formats, followed by built-in data validation.
- implement Gemini and train the ai to convert data from one form to another. Ai could also explain what they change to the data and show what they fix

Supporting Experience

Rite Aid, *Brooklyn, NY* — Dec 2022 - Jun 2025
Cashier

- Reduced checkout wait times by 50% and boosted customer satisfaction by 20% while maintaining accurate inventory organization.
